Temporary Tooth Jewel Application

1. Brush your teeth thoroughly.
2. Use a cotton roll to rub the tooth dry, on which you will be placing the jewel. **Do not touch tooth anymore and keep it dry by holding off the lip!**
3. Place a drop of the adhesive onto the wax sheet.
4. Use jewel handler to pick up jewel by slightly pressing wax tip onto crystal side of the jewel.
5. Dip silver back side of jewel into the adhesive.
6. Place jewel onto the prepared tooth, press slightly and hold for about 30 seconds.
7. Remove applicator from jewel by slightly rolling tip off the crystal.
8. Wipe the wax sheet and the jewel handler with a warm wet cloth and allow drying before returning to the package for next application.

Try not to eat or drink for about 45 min. after the attachment. After this time you can carry on as normal. Brush your teeth as usual while wearing your jewel.

Your tooth jewel can be removed easily. Simply pop it off with your fingernail. Do not use any sharp objects in the mouth! Your toothbrush will remove any left over adhesive from the tooth.

IMPORTANT!**IRRITANT!****Caution Adhesive contains Cyanoacrylate!**

Danger. Bonds skin and eyes in seconds. Keep out of reach of children. Avoid contact with skin and eyes. In case of eye contact, immediately rinse out eye with plenty of clean water, seek medical attention if symptoms persist. If skin bonding occurs soak in warm soapy water and gently peel, do not pull skin apart. If swallowed wash out the mouth with water, do not induce vomiting, seek medical advice and show this warning. Avoid contact with clothing, contact will damage clothes and could generate enough heat to burn underlying skin.
